Profile Summary

Developer relations engineer and technical writer focused on developer documentation, documentation testing, and open source contribution. I audit docs against live products, fix the issues that block developers during setup, and turn complex systems into practical learning material. Working across docs-as-code pipelines, API references, and developer education content.

Technical Skills

Documentation systems: Docs-as-Code, Docusaurus, Mintlify, Redocly, Git/GitHub, Markdown, XML

Languages and frameworks: JavaScript, TypeScript, React.js, Python, OpenAPI/Swagger

Web3 & Blockchain: Solidity, Web3.js, Ethers.js, Smart Contracts, dApp Development

Specialized domains: AI-Ready documentation, API/SDK documentation and testing, Blockchain technology

Technical Writing Portfolio

- **Hackmamba** — [How to Make Technical Documentation AI-Ready: Preventing Information Loss in Markdown](#)
- **Hashnode** — [How to Fix CORS Errors in Your Frontend App Using a Proxy Server](#)
- **Hashnode** — [How to Fix Form Validation UX: Switching from :invalid to :user-invalid](#)
- **Hashnode** — [Why the Revealing Module Pattern Property Won't Update \(and How to Fix It\)](#)

Experience & Contributions

Guest Technical Writer

Hackmamba

Sep 2026 – Present

Remote

- Published a tutorial for documentation teams on preventing content loss during Markdown serialization, covering how to preserve tabs, labels, commands, values, and surrounding context.
- Wrote to an editorial brief and completed two review rounds with a Hackmamba editor and growth marketer before publication.

Open Source Contributor, Developer Documentation

Intuition (0xIntuition/intuition-docs)

Jul 2026 – Present

Remote

- Audited the documentation against the live protocol and corrected 19 outdated currency references across 7 pages, replacing legacy ETH terminology with the network-native TRUST currency after the August 2025 MultiVault migration.
- Fixed an invalid npm installation command that blocked developers during setup, and corrected broken and self-referential Browser Extension links.
- Contributed [PR #90](#), [PR #91](#), and [PR #92](#); all three merged. Maintainer feedback: “Great updates! Thank you for the fixes. I appreciate your patience!”

Open Source Contributor, API Documentation

Empay HRMS (rushikesh-bobade/empay-hrms)

Jul 2026 – Aug 2026

Remote

- Authored the [OpenAPI 3.1 specification](#) for an open-source HR management platform, covering all 49 REST API endpoints.
- Validated the contract with Redocly CLI to catch structural and convention violations before maintainer review, then converted it into a rewritten API.md so the reference documentation and the spec agreed.
- Delivered as PR #145, which passed 6 CI checks and merged into main. Repo owner feedback: “This is incredibly thorough! Using an OpenAPI generator to build out the API.md was a brilliant approach.”

Open Source Contributor, Developer Education

The Odin Project (TheOdinProject/curriculum)

Jan 2026 – Present

Remote

- Authored a comprehensive update to the Styling Validation lesson teaching interaction-based CSS feedback with `:user-valid` and `:user-invalid` ([PR #30815](#), [PR #30994](#)).
- Added the missing Node.js version requirement to the webpack lesson after tracing a build failure to a hidden runtime dependency ([PR #30905](#)).
- Verified implementations against Baseline 2023 standards for consistent behavior across Chrome, Firefox, and Safari, and collaborated with core maintainers through pull requests.

Technical Writer

0xDezman Blog

Jan 2026 – Present

Remote

- Write technical articles on frontend development, UX, and web technologies, focused on simplifying complex engineering concepts for working developers. Selected pieces are listed under Technical Writing Portfolio.

Co-Founder & Technical Educator

Kodespot

Jan 2024 – Jul 2025

Nigeria

- Co-planned and secured a partnership with AngelHack for a Web3 onboarding event attended by 150+ people.
- Mentored learners through a structured blockchain and Web3 curriculum covering fundamentals, decentralized ledgers, consensus mechanisms, and transaction lifecycles.
- Guided hands-on learning across Ethereum, Bitcoin, BSC, and Solana, including wallet setup, on-chain transactions, and block explorer usage; broke down DeFi, NFTs, Layer 2 solutions, and token standards (ERC-20, ERC-721, ERC-1155).
- Managed the Kodespot X account and ran the community-facing education schedule.

Frontend Web Developer

Edensdigital

Aug 2023 – Jan 2024

Lagos State, Nigeria

- Developed reusable frontend components and layouts for client websites.
- Implemented responsive design principles and optimized UI performance.
- Debugged frontend issues and maintained code quality across projects.

Professional Development

Packt Technical Writing Fellowship

Sep 2025 – Jan 2026

Training in technical documentation, Markdown/MDX, Git, GitHub, and docs-as-code workflows. Certificate: [Coursera verification](#).

DXMentorship, Developer Relations (Cohort 5)

May 2026 – Jul 2026

Developer experience mentorship covering developer education, documentation, community support, technical communication, and DevRel practice. Mentors included William Umoh (Hackmamba), Shawn “swyx” Wang (Latent Space), and Jason Lengstorf.

Certificate: [Certification](#) · [Cohort 5 graduation list](#).

Education

University of Ilorin

B.Eng. Computer Engineering

2018 – 2024

Nigeria
